# Strong luminous power – smart controlled.

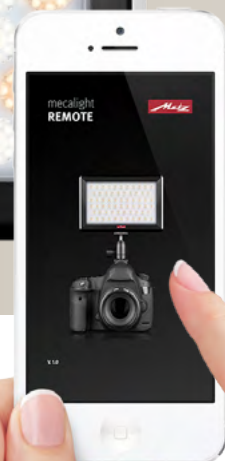

## Hightech video light with app control.

Normally, the modern DSRL- and system cameras have a video function. Thereby, it offers a variety of new fascinating possibilities for the videographer by using.

The new high-performance SMD-LED video lights mecalight L1000 BC and L1000BC X are equipped with a unique lens concept. The special set-up of the LEDs ensures an optimal colour rendering without colour cast and reduces multiple shadows substantially. Therefore, an illumination level of 1000 Lux can be achieved despite the compact housing. The Bi-Color LEDs allow an infinitely variable configuration of the colour temperature (2800 – 5700 Kelvin). Another technical highlight is the integrated wireless function: Therewith, the LED video lights can comfortably be controlled remotely via Smartphone.

The outdoor version mecalight L1000 BC X is additionally protected against splash water and foreign objects according to protection class IP44. Both LED video lights are completely developed and produced in Germany.

*Innovativ OLED display and comfortable operation with only three control elements.*
